

MINUTES OF THE AXAF MISSION PLANNING AND SCHEDULING

WORKING GROUP TELECON

APRIL 3, 1996

Jay Onken began the meeting by having Pat Slane walk through a facsimile of an Activity Description that he developed for this meeting. This was an excellent example and opened up discussions on dither start/stop, SIM movements, grating movements, and the SIOBS parameter statement. In addition to the changes agreed to on 3/27/96, it was agreed to:

- keep one dither statement but add a duration parameter
- break the SIOBS statement into an HRCOBS statement and an ACISOBS statement

Pat Slane agreed to help define the appropriate parameters for the HRCOBS and ACISOBS statements.

TRW stated that they are planning to detail out a DELTA-V burn as a pathfinder Activity Description. Marilyn Newhouse expressed that she was more concerned about the routine nominal operations Activity Descriptions, but that the DELTA-V would be all right to use as a pathfinder. TRW agreed to provide an annotated Table of Contents from OP03 *System and Operations Procedures*. This material would be a first-cut list of nominal Activity Descriptions, which Jay would then distribute.

There was some discussion about having a regular MPSWG meeting sometime within the first two weeks of May. The ASC and TRW are to provide Jay with dates when the proper personnel will be available.
